## Approved For Release 2001/08/13: CIA-RDP78B04747A002300090007-1

Budgetary Figures For Production
Quantities Of The Micro-Stereoscope And
Binocular Microscope Combination
Contract

STATINTL

Since only the optical design (Phase I) of the contract has been completed and only a preliminary mechanical layout has been made, it is obvious that the figures being submitted are for budgetary purposes only.

We have thoroughly reviewd our proposed mechanical mounting and have tried to anticipate any areas that might present problems in fabrication, however, it would be impossible to compute accurate costs without the final design.

However, we do feel that we are submitting cost figures that, although are budgetary, will not vary by more than a factor of 20%.

The following are our estimated manufacturing cost in lots of 100:

STATINTL

Note: Tooling would be short run type(economical runs of up to 250 units), to produce a minimum of 2000 units before replacement.
